Pe-Ha-Blue® Plus

BLUE,

FAST,

RELIABLE!

Combination of sodium hyaluronate and trypan blue

Improved surgical workflow:

- Time saving surgery and increased effectiveness of the surgical workflow.
- Lower contact and manipulation time.

Increased visualization:

- Enhances visibility and easier to remove completely.

Intraoperative protection of the macula:

- Reduction of the UV portion in the light spectrum of the surgical microscope.

Selective staining of eye tissue:

- Improved visibility of the anterior capsule (capsulorhexis) and of capsule defects.

For challenging indications:

- In the fields of cataract, glaucoma and refractive surgery.
- Mature cataracts
- Premium IOLs
- PEX eyes
- Necessary pupil extensions (e.g., Malyugin ring)
- Intraoperative complications such as capsular rupture, pronounced synchysis and vitreous opacity.
